

MINGLU SUN

Boston, MA

sun.minglu@northeastern.edu ◇ yourwebsite.com ◇ github.com/ooodddee

EDUCATION

Northeastern University, Boston, MA

M.S. in Computer Science, Khoury College of Computer Sciences

Sep 2024 – Expected May 2027

GPA: 4.00/4.00

Kunming University of Science and Technology, Kunming, China

B.A. in Journalism and Communication

Sep 2019 – Jun 2023

Minor: Network and New Media

PUBLICATIONS & MANUSCRIPTS

Minglu Sun, Lan Chen, and Hang Jiang. “Knowing Is Not Telling: Identity Ossification in LLM Representations of Trans-border Communities.” *Under review*, 2026. Presented as a **parallel talk at IC2S2 2026**. [[Code & Data](#)] [[Slides](#)]

RESEARCH EXPERIENCE

Identity Ossification in LLM Representations of Trans-border Communities

First Author and Lead Researcher, Northeastern University

Jan 2026 – Present

| [[Code & Data](#)] [[Slides](#)]

- Introduced the **Trans-border Identity Ossification Diagnostic Framework (TIODF)** and designed a bilingual evaluation across **9 trans-border communities and 5 LLMs** using community-grounded Knowledge Cards, paired knowledge probes, and open-ended narrative analysis.
- Identified a **knowledge-framing dissociation**: models could retrieve cross-border cultural facts correctly while failing to preserve them in open-ended narratives; validated the analysis through community-informed human annotation and multilingual embeddings.

Ranked Last: Benchmarking Individualized Belief Reasoning in Language Models

Lead Researcher, Northeastern University

2026 – Present

| [[Code](#)]

- Developed a benchmark for testing whether LLMs can reason about an individual’s beliefs and value trade-offs rather than relying on population-level patterns.
- Evaluated personalized reasoning using data from **54 participants**, including **356 belief-structure instances** and **1,386 belief-decision observations**, with leave-one-person-out and leave-one-domain-out evaluation against retrieval- and reflection-based baselines.

What Counts as Recovery? Satellite vs. Ground Assessment at Burning Man

Lead Researcher, Northeastern University

2026 – Present

| [[Code](#)]

- Combined **Sentinel-2 imagery**, **DINOv2 representations**, and **Bureau of Land Management inspection data** to compare satellite-derived environmental recovery signals with ground-measured debris.
- Developed control-based seasonal correction and found little correspondence between satellite and ground measurements, motivating an HCI investigation into how competing definitions of “recovery” produce different environmental assessments.

ACADEMIC SERVICE

Peer Reviewer, International Conference on Computational Social Science (IC2S2)

2026
